

FLOATING SUCTION

Suction for the purest water

PRODUCT DESCRIPTION

Complete set for flexible floating suction in the tank. The set consists of a brass tank penetration with an extended thread to ensure a good fixation. The hose has a pressed coupling to prevent the intake of air. The floater is produced in one piece to avoid leakage. Available in a version with 2 or 3 meter hose.

In addition, there are two types of suction baskets the Twist and the Saff. The Twist has a coarse mesh size of 1 mm and the Saff a fine mesh size of 0.44 mm. In principle, the Twist is intended for rainwater systems with a Trident pre-filter and the Saff for systems without a pre-filter.

The special tank penetration with special flexible hose prevents frictional forces, so that the watertightness is guaranteed even after several years.

SCOPE

When using the floating suction units TWIST and SAFF, the water is sucked in 15 cm below the water level. There is the purest water in a tank. With a low water level, the hose length prevents the suction basket from falling on the bottom. This way the pump is protected against both floating dirt and sediment.

MATERIAL

NAME	Material
Tank transit	Brass
Spiral-reinforced hose	Bacterial-inhibiting thermoplastic
Suction basket	Stainless steel
Hose clamps	Stainless steel
Foot valve	PP and Brass
Tracker	PE
Spiral	Stainless steel

SCOPE OF DELIVERY

Product consists of: 1 x stainless steel suction basket with mesh size of 1 mm TWIST or 0.44 mm SAFF, with float and mounting bracket, 1 bacteria-inhibiting flexible hose 1" with hose nozzle with built-in foot valve, 1 x brass tank penetration 90° angle with hose nozzle included seal ring.
