

IRM® - 6 Watermanager B-Class

IRM®-6 -Watermanager RM-6

B-Class with supply pump

Description

The IRM®-6 Watermanager B-Class is a complete system for bottom installation with IRM® controls, integrated disconnection tank and built-in double pump system. The IRM® controls control the water levels in the disconnection tank and the large rainwater well. The controls also provide for cascade control and an operation hours schedule for the pumps. Lacking rainwater, system fault or manual operation, the system will switch back to the disconnection tank. The drinking water is supplemented into the disconnection tank through a special proportional float. This happens in a reliable manner in accordance with EN1717 and the machine as such is Belgaqua and KIWA certified.

The switch to municipal water can also take place manually. The municipal connection is fitted with stagnation protection that automatically refreshes the water in the machine every 10 days. The potential free contact makes a connection to automated and building management systems possible. Fitted with automatic filter cleaning controls.

Specifications

Width in mm	550
Depth in mm	650
Height in mm	850
Weight (empty)	60 kg
Suction pipe	2 x 1" bi
Pressure pipe	1 1/4"
Overflow in mm	2 x 75
Drinking water	2 x 3/4"
Floater cabel	20 m
Power	1,6 kW
Max. flow	8 m3/h
Max. Suction lift	20 m
Max. pressure	3,5 bar
Voltage	230V/50Hz
Weight (empty)	60 kg

Materials: cover of PS, Breaktank of PE, Console of galvanized steel, pump console PP
